

ONI DANIEL

Full-Stack Developer

Cambridgeshire, United Kingdom • onidaniel003@gmail.com

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer with 5+ years of experience building scalable, high-performance web applications. Highly proficient in React and Next.js on the frontend, and Node.js, NestJS and Express on the backend, with hands-on expertise in PostgreSQL, MongoDB, and Redis. Proven ability to deliver end-to-end product features — from pixel-perfect UI to robust API design and database architecture — in fast-paced, collaborative environments. Based in Cambridgeshire, UK and open to hybrid and remote opportunities.

CORE SKILLS

Frontend: React.js, Next.js (App & Pages Router), TypeScript, JavaScript (ES2022+)
Styling: Tailwind CSS, CSS Modules, Styled Components, Framer Motion
State Management: Redux Toolkit, Zustand, React Query / TanStack Query, Context API
Backend: Node.js, NestJS, Express.js, REST API,

Databases: PostgreSQL (raw SQL & ORM), MongoDB (Mongoose), Prisma, TypeORM
Caching: Redis (session caching, queue management, rate limiting, pub/sub)
Tools: Git, GitHub, Vercel, Nginx
Testing: Jest, React Testing Library

WORK EXPERIENCE

Senior Full-Stack Developer | Arclite Digital Ltd — London (Remote) — Mar 2023 – Present

- Led end-to-end development of a SaaS project management platform serving 12,000+ users, built with Next.js 14 (App Router), NestJS, PostgreSQL, and Redis.
- Designed and implemented a microservices architecture with NestJS modules, reducing average API response times by 38% through Redis-backed caching layers.
- Built real-time collaboration features (live cursors, presence indicators) using WebSockets and Redis Pub/Sub integrated within a Next.js and Node.js stack.
- Migrated legacy REST endpoints to GraphQL (Apollo Server), cutting over-fetching by 60% and improving frontend data management across React components.
- Mentored two junior developers on TypeScript best practices, React performance optimisation, and Git branching workflows.

Full-Stack Developer | Nexora Labs — Cambridge (Hybrid) — Jun 2021 – Feb 2023

- Developed and maintained multiple client-facing web applications using React, Next.js, Node.js, Express, and MongoDB, supporting over 50,000 monthly active users.
- Architected a multi-tenant authentication system with NestJS Guards, JWT, and role-based access control (RBAC), securing APIs for three separate client products.
- Integrated Redis for session management and API rate-limiting across all Express and NestJS services, improving platform stability under peak load.
- Optimised PostgreSQL query performance through indexing strategies, query planning analysis, and connection pooling with pgBouncer, reducing DB query times by 52%.
- Built a fully server-side-rendered e-commerce frontend with Next.js (SSR/ISR), improving Google Lighthouse performance scores from 48 to 91.
- Collaborated closely with designers using Figma-to-React workflows, building a reusable component library that cut UI development time by 30%.

Frontend Developer | [Stackwave Solutions — Manchester \(Remote\)](#) — Jan 2020 – May 2021

- Built responsive, accessible user interfaces with React and TypeScript for fintech and logistics clients, following WCAG 2.1 AA accessibility standards.
- Developed custom hooks and Context API patterns for complex state management, reducing component re-renders by 40% across key dashboards.
- Consumed and integrated RESTful APIs (Node.js/Express backends) using Axios with interceptors for token refresh and error normalisation.
- Worked within an Agile/Scrum team using GitHub Projects, conducting code reviews and maintaining a consistent PR review cycle.
- Wrote comprehensive unit and integration tests with Jest and React Testing Library, achieving 85% code coverage across core UI modules.

KEY PROJECTS

Taskflow — SaaS Project Management Platform

- Full-stack application built with Next.js 14, NestJS, PostgreSQL, Redis, and TypeScript. Features drag-and-drop kanban boards, real-time notifications, team workspaces, and OAuth 2.0 authentication.
- Redis cache layer reduced database reads by ~65% during high-traffic sprints. Deployed to Railway with Docker containers and zero-downtime rolling deployments.

ShopNest — Multi-Vendor E-Commerce Platform

- Built with Next.js (SSR + ISR), Node.js/Express API, MongoDB and Stripe integration. Includes vendor dashboards, inventory management, and a real-time order tracking system.
- Implemented Redis-based cart session persistence and rate limiting, handling up to 3,000 concurrent requests without degradation.

DevCollab — Real-Time Code Collaboration Tool

- Peer-to-peer coding environment built with React, Node.js, Socket.io, and Redis Pub/Sub for real-time code sync across multiple sessions.
- Integrated Monaco Editor (VS Code engine) with operational transform conflict resolution, supporting up to 20 concurrent collaborators per room.

EDUCATION

BSc Computer Science | [Anglia Ruskin University, Cambridge](#) — 2016 – 2019

- Modules included Web Application Development, Database Systems, Software Engineering, and Computer Networks.
